**Sharing the Costs and Benefits of Energy and Resource Activity** Lila Katz Barrera-Hernández 2016 A new phase is emerging in the relationship between energy and resource activities and the communities that are affected by them. Any energy or resource project - a mine, a wind farm, a dam for hydroelectricity, or a shale gas development - will involve a mix of impacts and benefits for communities. For many years, the law has mediated impacts on communities and provided for the distribution of financial benefits. Now, there is growing awareness of the need to consider not only a wider range of costs and benefits for communities from energy and resource projects, but also the effects on communities at multiple scales and in complex ways. Sharing the costs and benefits of natural resource activity has now become a legal requirement for energy and resource projects operating in many jurisdictions, particularly in developing countries. This book uses cases studies from across the globe to examine the emergence of such legal measures, their advantages and disadvantages, and the improvements that may be feasible in the legal frameworks used to distribute the costs and benefits of energy and resources activity. The book has three parts: Part I considers general legal and conceptual frameworks; Part II addresses the mechanisms available to distribute costs and benefits; and Part III considers the role of public engagement and participation in the sharing of the costs and benefits from energy and resource projects.

Cost-Benefit Studies of Natural Resource Management in Southeast Asia David James 2015-03-19 This book applies cost-benefit analysis techniques in the management of environment and natural resources in developing countries of the Southeast Asian region and presents a compendium of studies conducted by researchers supported by the Economy and Environment Program for Southeast Asia (EEPSEA). It emphasizes the close relationship between the environment and natural resources and economic development in such countries, addressing a wide range of problems that can be understood using economic evaluation techniques. General guidelines for conducting economic appraisals are provided, with the case studies illustrating how they can be applied in a developing country context. *Cost-Benefit Analysis Application in Environmental and Natural Resource Management in Southeast Asia* serves as essential reading for teachers, researchers, students and practitioners in environmental and natural resource economics, economic development and key issues facing policymakers in the Southeast Asian region.

*The Employee Benefits Answer Book*  
Rebecca Mazin 2010-12-14 THE  
EMPLOYEE BENEFITS ANSWER BOOK

This go-to resource contains the most reliable information needed to answer questions about employee benefits that arise in day-to-day business. Complex and ambiguous topics are illustrated with concrete examples that can help make informed, sound decisions, and ultimately, the ability to ask better questions. Written by Rebecca Mazin—an expert in human resource policies and procedures—the book addresses the most commonly asked benefits questions including: How many vacation days do employees get? What's the difference between a POS and an HSA? Is offering check-ups and eye exams enough? What's involved in flexible spending accounts? What do I need to know about 401(k) and Non-Qualified Plans? Do employees expect life insurance and disability? From EAP to concierge services, what else do employees want? How does COBRA work and what else do I need to do? What can employers do to rein in benefits costs? The book also highlights specific practice examples that are "worth repeating," or "better forgotten," and includes a wide-variety of checklists and charts. The Employee Benefits Answer Book is organized by topic and arranged in a question and answer format making it easy to zero in on a particular subject. Using this important book, employers can create coherent policies based on a clear understanding of all benefits.

**Access and Benefit Sharing of Genetic  
Resources, Information and Traditional  
Knowledge** Charles Lawson 2022-10-14

Addressing the management of genetic resources, this book offers a new assessment of the contemporary Access and Benefit Sharing (ABS) regime. Debates about ABS have moved on. The initial focus on the legal obligations established by international agreements like the United Nations Convention on Biological Diversity and the form of obligations for collecting physical biological materials have now shifted into a far more complex series of disputes and challenges about the ways ABS should be implemented and enforced. These now cover a wide range of issues, including: digital sequence information, the repatriation of resources, technology transfer, traditional knowledge and cultural expressions, open access to information and knowledge, naming conventions, farmers' rights, new schemes for accessing pandemic viruses sharing DNA sequences, and so on. Drawing together perspectives from an interdisciplinary range of leading and emerging international scholars, this book offers a new approach to the ABS landscape; as it breaks from the standard regulatory analyses in order to explore alternative solutions to the intractable issues for the Access and Benefit Sharing of genetic resources. Addressing these modern legal debates from a perspective that will appeal to both ABS scholars and those with broader legal concerns in the areas of intellectual property, food, governance, Indigenous issues, and so on, this book will be a useful resource for scholars and students as well as those in government and in international institutions working in relevant areas.

**Benefit Sharing** Bevis Fedder 2013-05-29  
Access to genetic resources and Benefit Sharing (ABS) has been promoted under the Convention on Biological Diversity, with the aim of combining biodiversity conservation goals with economic development. However, as this book shows, since its inception in 1992, implementation has encountered multiple challenges and obstacles. This is particularly so in the marine environment, where interest in genetic resources for pharmaceuticals and nutrients has increased. This is partly because of the lack of clarity of terminology, but also because of the terms of the comprehensive law of the sea (UNCLOS) and transboundary issues of delineating ownership of marine resources. The author explains and compares relevant provisions and concepts under ABS and the law of the sea taking access, benefit sharing, monitoring, compliance, and

dispute settlement into consideration. He also provides an overview of the implementation status of ABS-relevant measures in user states and identifies successful ABS transactions. A key unique feature of the book is to illustrate how biological databases can serve as the central scientific infrastructure to implement the global multilateral benefit sharing mechanism, proposed by the Nagoya Protocol. The research for this book was supported by both the Bremen International Graduate School for Marine Sciences (GLOMAR) and the International Research Training Group INTERCOAST - Integrated Coastal Zone and Shelf-Sea Research.
